

# Smart device apps in clinical practice

Kelly Bohot @kellybohot08, Health Informatics New Zealand – Rotorua – 2017

# opportunity

## Laying foundations for mobility

- Mobility strategy and community AH mobile use case
- Interest and demand to use mobile apps as part of clinical practice
- 50,000-260,000 health related apps available

**Blood Pressure**

Systolic  
mmHg 119

Diastolic  
mmHg 75

Heart Rate  
bpm 69

**Start New Measurement**

The UK's National Health Service has relaunched its Digital Apps Library. The four-year project has produced only one approved mobile health app, but officials say the library will grow as more are certified.

# thoughts about mobile apps

“Desktop applications for clinics if fine, but more portable access would be good for rounds”

“the purpose of apps needs to be improving workflow (vs health targets and patient experience), which will allow our team to be more effective in providing better care anyway”

‘I often want to know the result of a blood test while on the round, and need one of the team to run off down the other end of the ward to view that information’.

“safety of data is paramount in our professions...it takes one bad thing to happen that gets into the media, then the whole thing could break down”.

“doctors who are training are now expecting to use technology quite heavily”

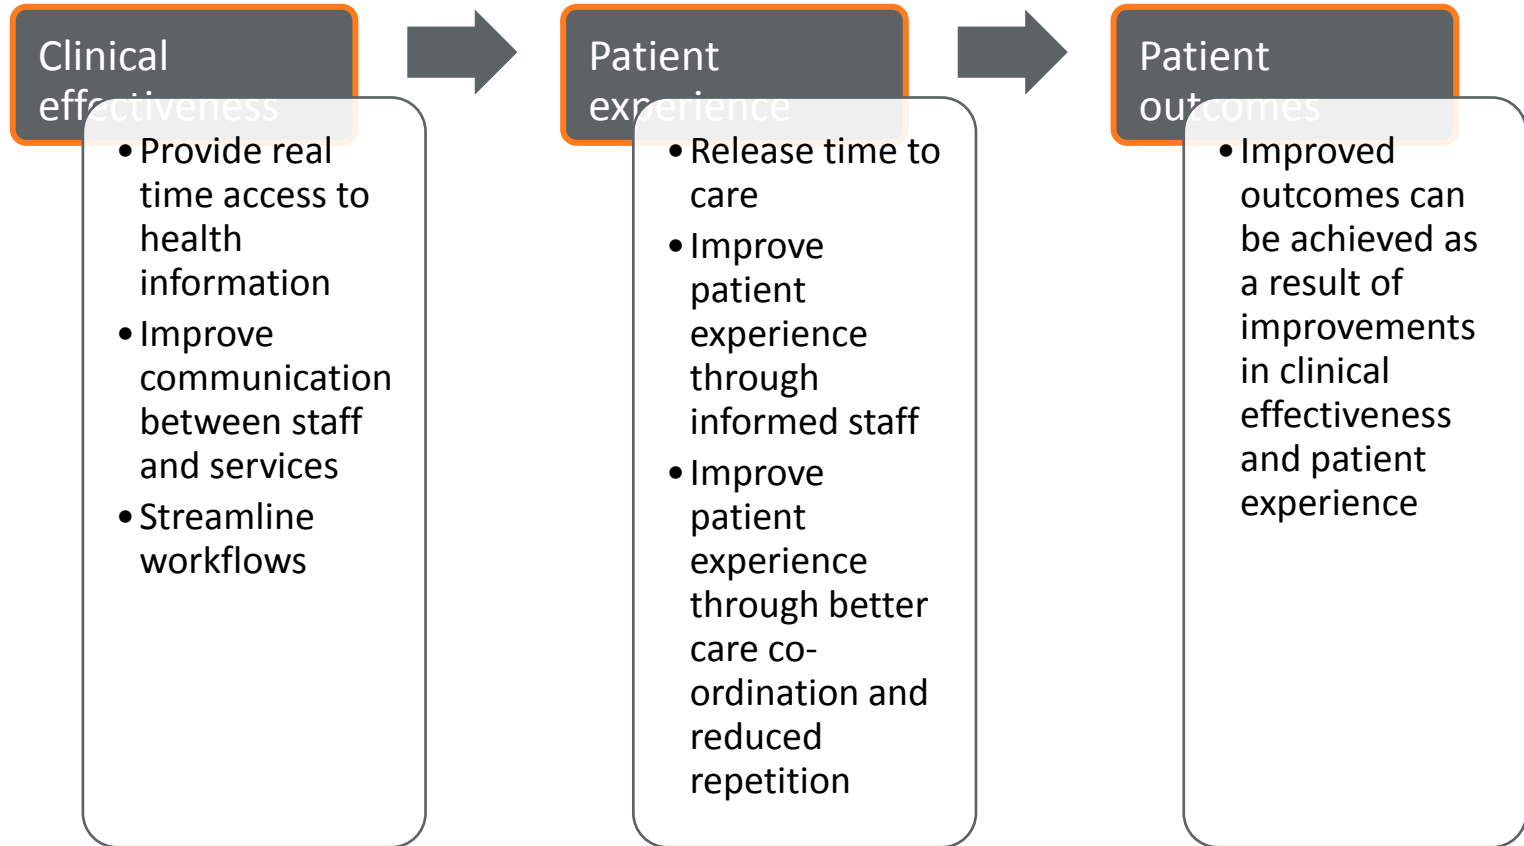

# horizon scanning

- evaluate apps
- develop own apps
- develop quality control programmes

# operational excellence

# app request form

Purpose of app

what – where – why – who – when - how

Impact on clinical effectiveness and efficiency

Impact on patient experience

Ease of implementation

Impact on data and security

# testing the idea

Name	<input type="text"/>
Email address	<input type="text"/>
Position	<input type="text"/>
Date	<input type="text" value="DD/MM/YY"/>
Name of app	<input type="text"/>
Developer	<input type="text"/>
Cost (\$)	<input type="text" value="0.00"/>
Where did you find the app?	<input type="text"/>

What is the primary purpose/goal of the app? Please tick which of the following statements best describe the app

- ☐ Activity and workflow capture for administrative purposes eg Trendcare for capturing workload
- ☐ Clinical decision support tool eg calculators, drug interaction checker, fluids, pathways
- ☐ Patient education and engagement eg patient information videos, translation
- ☐ Patient information manager, information viewer and e-notes/orders eg ePA, Concerto - requires link to patient related information
- ☐ Data gathering for audit, research and improvement eg survey monkey
- ☐ Clinical education eg Khan academy
- ☐ Administrative task facilitation e.g. speech-to-text, email, calendar

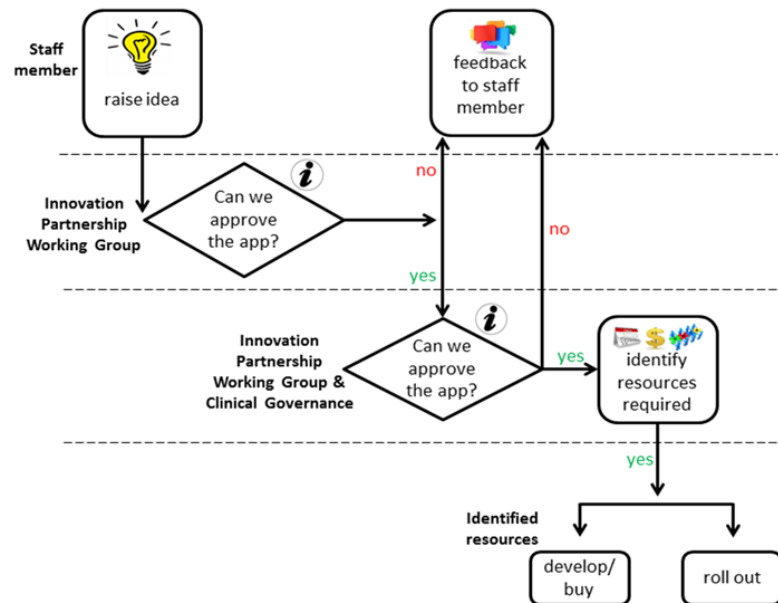

**Description and use of the app**

Please use the boxes below to describe the app and how staff would use it

What will the app be used for?

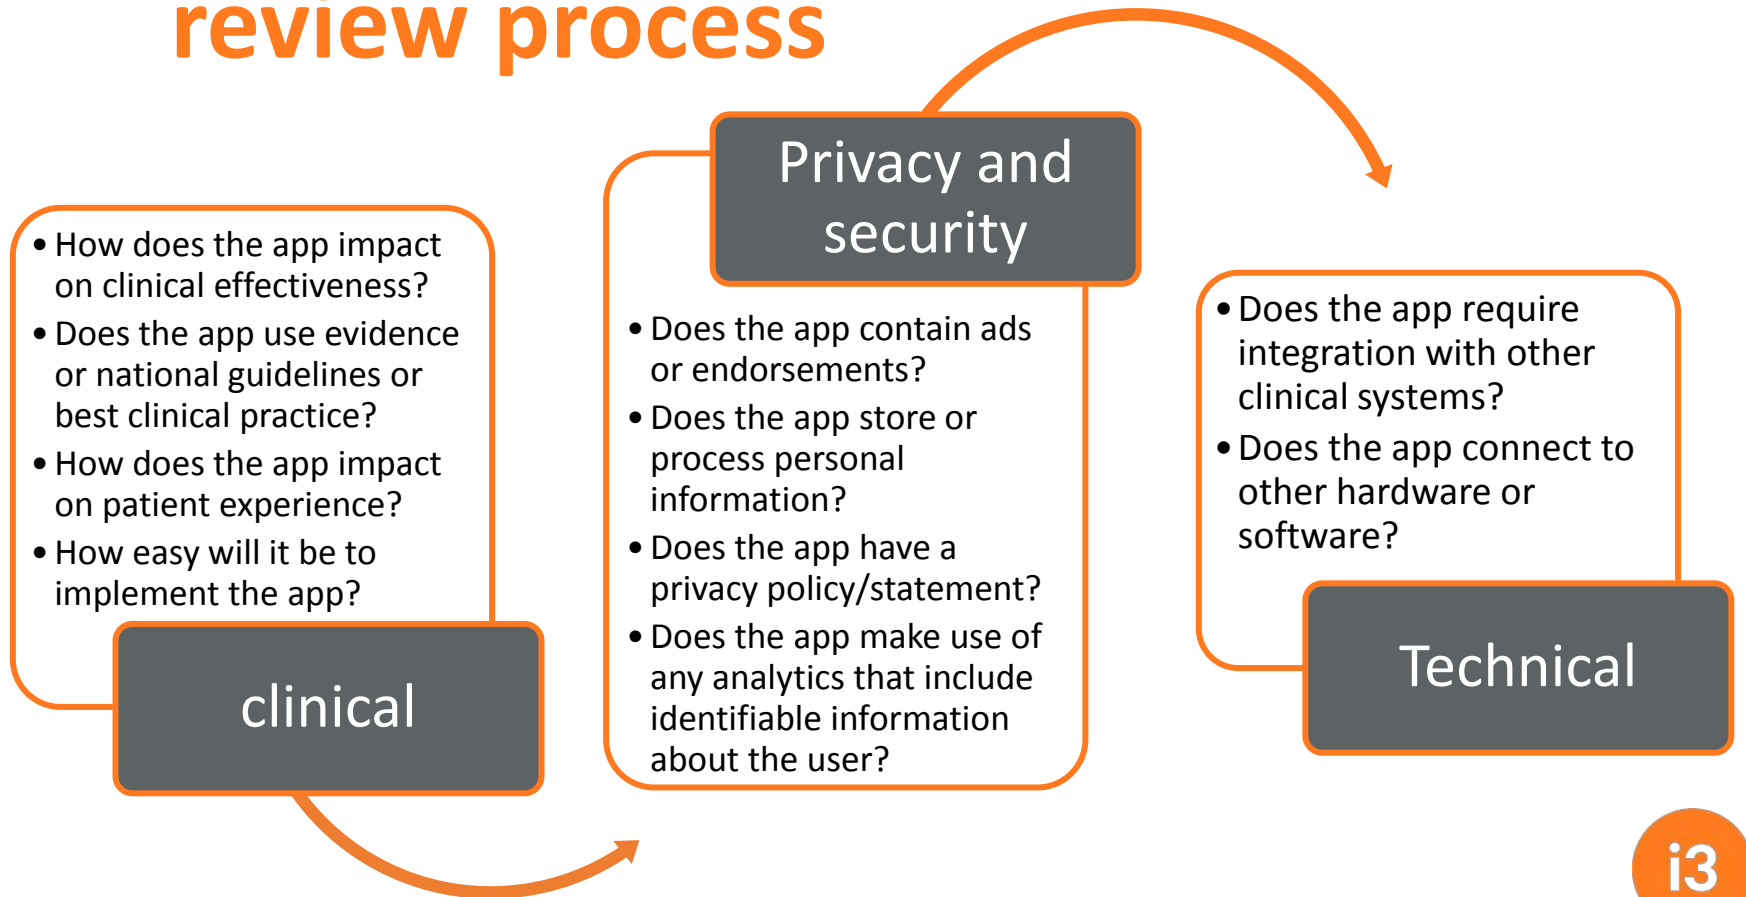

Thank you for sharing your app idea or requesting an app to use in your work

What will happen to my idea?

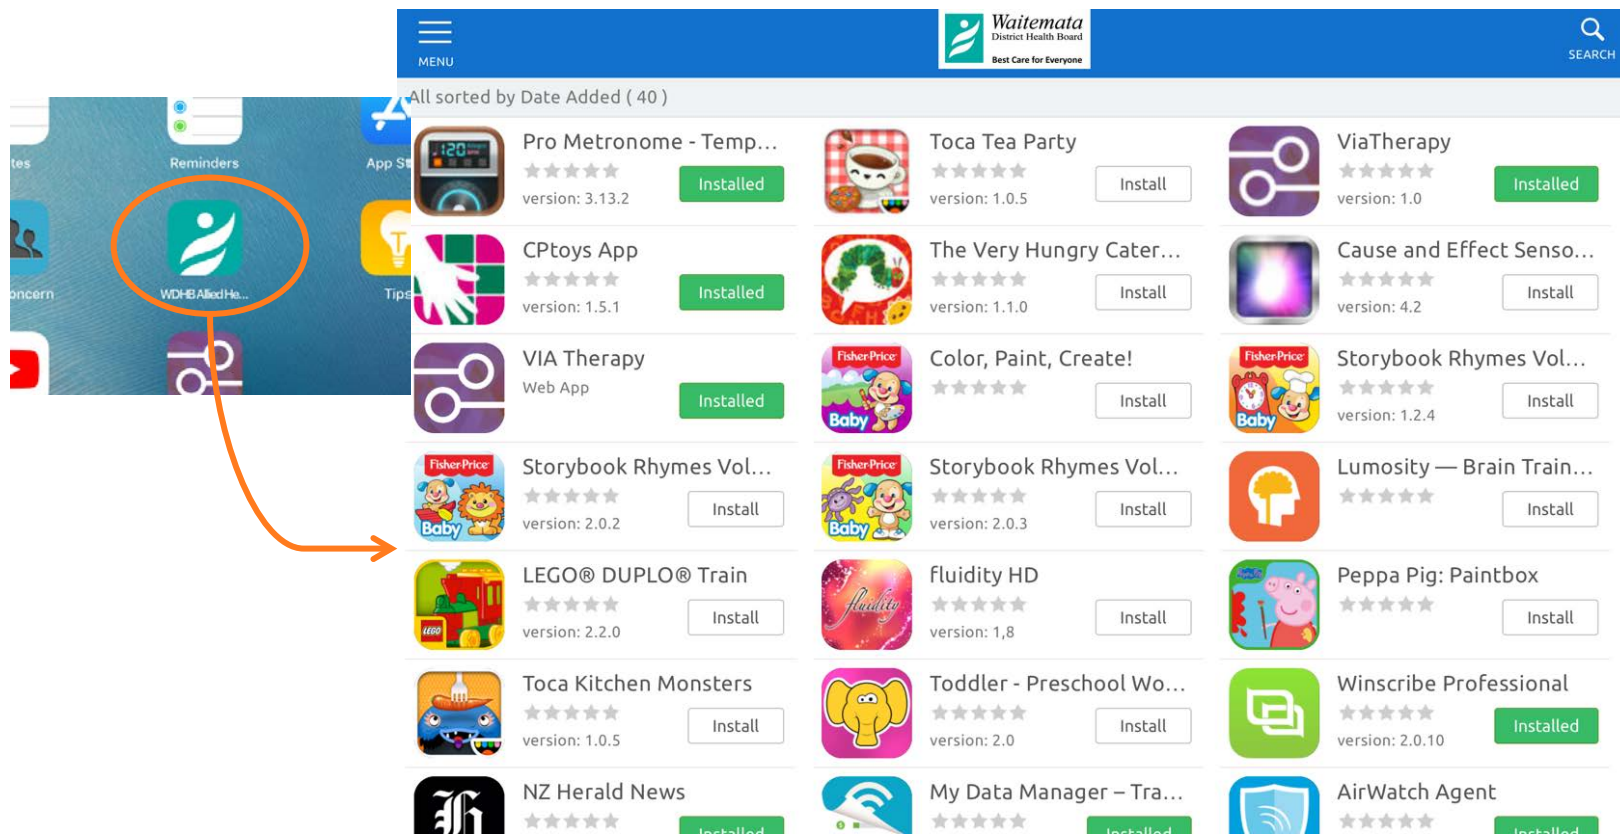

# review process

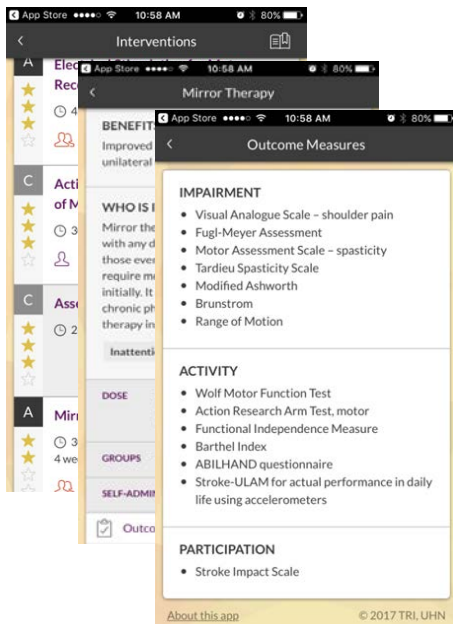

# accessing apps

The app interface shows a list of applications sorted by Date Added (40). The applications are displayed in a grid format, each with an icon, name, rating, version, and an 'Install' or 'Installed' button.

App Icon	App Name	Rating	Version	Status
	Pro Metronome - Temp...	★★★★★	version: 3.13.2	Installed
	Toca Tea Party	★★★★★	version: 1.0.5	Install
	ViaTherapy	★★★★★	version: 1.0	Installed
	CPtoys App	★★★★★	version: 1.5.1	Installed
	The Very Hungry Cater...	★★★★★	version: 1.1.0	Install
	Cause and Effect Senso...	★★★★★	version: 4.2	Install
	VIA Therapy Web App	★★★★★		Installed
	Color, Paint, Create!	★★★★★		Install
	Storybook Rhymes Vol...	★★★★★	version: 1.2.4	Install
	Storybook Rhymes Vol...	★★★★★	version: 2.0.2	Install
	Storybook Rhymes Vol...	★★★★★	version: 2.0.3	Install
	Lumosity — Brain Train...	★★★★★		Install
	LEGO® DUPLO® Train	★★★★★	version: 2.2.0	Install
	Fluidity HD	★★★★★	version: 1,8	Install
	Peppa Pig: Paintbox	★★★★★		Install
	Toca Kitchen Monsters	★★★★★	version: 1.0.5	Install
	Toddler - Preschool Wo...	★★★★★	version: 2.0	Install
	Winscribe Professional	★★★★★	version: 2.0.10	Installed
	NZ Herald News	★★★★★		Installed
	My Data Manager – Tra...	★★★★★		Installed
	AirWatch Agent	★★★★★		Installed

# example apps

“having this technology is vital – it enhances the service we offer” (therapist)

“I could see the volume ...using the decibel/sound level meter app made it easier to understand the purpose of the speech therapy activities” (patient)

“I find videos and pictures very helpful to learn...really helpful to see what happens when Nick swallows” (patient’s wife)

# learnings

## High risk

need integration with health IT systems or store personal health information  
pose significant risk to patients due to inherent complexity, functionality or potential for harm if misused, eg displays, stores and analyses or shares health information

## Medium risk

include advice/calculators/algorithms  
may cause harm if used inappropriately or without adequate training, eg provides, facilitates or supplements care by promoting, coaching or reminding patients, helps patient to track or organise health information

## Low risk (*but not no risk*)

Do not touch DHB systems or personal health information  
Pose minimal risk to patients if misused, eg electronic versions of medical text books, patient education tools

# summary

- Mobile health apps can create opportunities to optimise clinical effectiveness, patient experience and patient outcomes
- Important to have a framework to review and prioritise apps
- Apps can be categorised by risk. Risk rating can be used to determine rigour required for review
- All apps require some level of critical evaluation
